Acknowledgement of Assistance

ChatGPT, Assistance given to author, AI. I had an issue with solving problem 4 myself and was having trouble with figuring out how to write a proper for loop for my profit calculation, so I asked ChatGPT: “What are the best ways in python coding to combine variables in a for loop in a function?” ChatGPT answered my question and gave me the zip() command as an option, which I was then able to input into my code and solve the problem.West Point, NY. 26JAN2026. ChatGPT, Assistance given to author, AI. While I was trying to solve problem 5 myself I found myself unable to figure out a way to assemble the tuples in the desired order the problem wanted the values to be returned as (index, profit). So I asked ChatGPT “How would one flip tuples in python using a for loop?” ChatGPT responded with a helpful instructional example which allowed me to properly flip the tuple and get the correct answer which I needed for problem 5.
