Acknowledgement of Assistance

ChatGPT, Assistance given to author, AI. I had an issue with solving problem 3 myself and was having trouble with figuring out how to create a unionized list of keys to draw from for my for loop, so I asked ChatGPT: “What is the best way to get a union of a collection of numerical keys from two different dictionaries in python.” ChatGPT answered my question and gave me the code keys_union = d1.keys() | d2.keys() as an option, which I was able to implement into my code and continue solving the problem. West Point, NY. 25FEB2026. Link to conversation: https://chatgpt.com/share/e/699fbbe2-ac58-8011-8b78-a11c789c85a0

ChatGPT, Assistance given to author, AI. I had an issue with solving problem 6 myself and was having trouble figuring out how to index through the length and achieve the values of a list of integers, so I asked ChatGPT “How do I index through a list of integers in python?” ChatGPT answered my question and gave the information concerning how I can loop using ‘ I in range(len(numbers)):, which I found very useful and was able to apply to my loop to achieve a solution for problem 6.
